PPE for Lewis County Dental Offices

The Lewis County Emergency Operations Center would like to support the local Lewis County Dental offices as they struggle to obtain the personal protective equipment (PPE) required to safely reopen.

Unfortunately, because of current supply chain issues and high demand for N95 Masks, many offices are struggling to meet the requirements set for reopening. The Emergency Operations Team is able to allocate to each dentist office an allotment of N95 Masks, along with directions to utilize Batelle's decontamination process through our local Valley View Medical Center. This should aid these offices in getting up and running in some capacity. There is a limited amount available and it will be allocated out on a first come first serve basis.

In order to request PPE for your dental office please go to <https://lewiscountywa.gov/departments/emergency-management/emergency-operations-center-covid-19-response/ppe-resource-requests-dental-facilities/> and find the Resource Request Form specifically labeled for Dental Offices.
